Diagnostic check: six questions, 10 minutes

Answer without looking at your notes. Indicate the questions for which help is needed. This diagnostic test is not graded.

1. Circumference of a circle of radius 1?

2. How many degrees is a quarter turn?

3. Calculate $\sqrt{\frac{1}{2}}$.

4. Coordinates of the reflection of ($a; b$) with respect to the x-axis?

5. Simplify $\frac{5\pi}{3} - 2\pi$.

6. In a right triangle, opposite side 3 and hypotenuse 5: sine?

After the diagnostic check. Go over the flagged concepts with the teacher; redo a question similar, then explain the rule used.

Oral work and logic. Present an equality between associated angles, naming the symmetry that justifies it; explain what a radian measures.

Investigate before formalising

Construct, without a protractor, a point at angle $\frac{\pi}{3}$ then a corner point $\frac{\pi}{4}$. Justify the exact values of their coordinates from the figures.

Organisation. Individual work 5 min, discussion in pairs 5 min, whole-class sharing 5 min. Keep a record of an attempt, even an unfinished one. A conjecture must then be justified.
