Diagnostic: six questions, 10 minutes

Answer without consulting the lesson. Mark the questions for which help is needed. This diagnostic is not graded.

1. Out of 40 students, 12 play a given sport. What proportion is that?
2. If $P(A) = 0.3$, give $P(\overline{A})$.
3. Write “A and B” in set notation.
4. Write “A or B” using the inclusive or.
5. Calculate 0.4×0.25.
6. A fair die is rolled. Give $P(\{2; 4; 6\})$.

After the diagnostic. Revisit the flagged topics with the teacher; redo a similar question, then explain the rule used.

Speaking and logic. Explain aloud what “given”, “and” and “at least” mean. On a tree, justify an addition and a multiplication.

Investigate before formalising

Build a table of 100 people in which A and B are independent, with 40 in A and 30 in B. Change two cells, keeping these totals, so as to destroy the independence.

Organisation. Individual investigation 5 min, comparison in pairs 5 min, class discussion 5 min. Keep a record of one attempt, even an unfinished one. A conjecture must then be justified.
