Diagnostic check: six questions, 10 minutes

Answer without consulting the course. Indicate the questions for which assistance is required. diagnostic check is not graded.

1. $(2;-1)\cdot(1;2)$?

2. Does item (1; 2) verify 2 $x-y=0$?

3. Solve $x+y=5,\ x-y=1.$

4. Distance from (1; 2) to (4; 6) ?

5. Complete $x^2-4x.$

6. Solve x^2+y^2 = 0 in $\mathbb{R}^2.$

After the diagnostic check. Retrieve the concepts indicated with the teacher; repeat a question and then explain the rule used.

Speaking and reasoning. Present the two conditions characterizing a project.
Geometrical and algebraic evidence of a mediator.

Search before formalizing

From $P(4; 3)$ and $d : y = 2x$, compare distances to three points of d, then search and demonstrate which is the shortest.

Organization. Individual research 5 min, confrontation 2 5 min, pooling 5 min.
Keep a trace of a test, even if not completed. A conjecture must then be justified.
